ADVANCED NANOTECHNOLOGY LIMITED COMPLETES FIRST MAJOR ZINCLEAR®-IM SHIPMENT TO DOW AMERCHOL

Advanced Nanotechnology Limited today announced the completion of its first major commercial shipment of ZinClear®-IM to Amerchol, a business of The Dow Chemical Company, under the recently announced distribution agreement. This order was shipped from the Company's Western Australian facility in full and on time.

Last month, Dow (via its Amerchol business) became Advanced Nano's exclusive marketer and distributor within North and Latin America for Advanced Nano's patent-pending ZinClear®-IM products. This multi-year, renewable distribution agreement provides personal care customers with a leading-edge sun care technology combined with the technical and marketing resources of Dow to ensure formulation, technical and logistics support.

Since becoming Advanced Nano's distributor in April 2008, Dow has purchased US\$329,000 worth of ZinClear®-IM, and paid the US\$650,000 working capital deposit as per the agreement.

Thibaut Mortier, General Manager at Advanced Nano, said, "We are delighted at the support and commitment demonstrated by Dow in the North American and Latin American markets. Dow is providing the critical marketing and technical support required by customers to maximize ZinClear®-IM potential in their formulations.

ZinClear®-IM, used in beach wear, daily wear and colour cosmetics formulations, greatly increases skin protection from both UVA and UVB rays. ZinClear®-IM combines the safety and broad spectrum UV absorption properties of zinc oxide with superior transparency and improved aesthetic benefits.

ZinClear is a registered trademark of Advanced Nanotechnology Limited.

About Advanced Nanotechnology Limited

Advanced Nanotechnology Limited develops, manufactures and sells a range of advanced metal oxide powders and dispersions. Advanced Nano's products are marketed under four parent brands, ZinClear® – broad spectrum, mineral-only UV filters in cosmetic emollients used for sunscreen, skincare, and pharmaceutical formulations that allow SPF 30+ sunscreens containing only zinc oxide as the UV absorber; Alusion® – plate-shaped particles used to enhance colour cosmetics formulations to mask wrinkles and fine lines; Cercat™ – cerium oxide nanoparticle dispersion used in diesel fuel applications; and NanoZ® – nano zinc oxide additives that allow stable UV absorber performance for coatings and plastics.
