15 FEBRUARY 2006

CORNELIUS TO DISTRIBUTE ADVANCED NANOTECHNOLOGY'S PRODUCTS IN EUROPE

Advanced Nanotechnology Limited today announced the signing of an agreement for the Industrial Division of the UK based Cornelius Group to become exclusive agents for the sale and distribution of its innovative "nano" products in Europe.

At the forefront of the new product offerings will be nanoZ™. This is a nano particle sized zinc oxide that can be used as an additive in coatings and plastics, to create an effective barrier against UV light, whilst remaining completely transparent to visible light. Already used in wood coatings, nanoZ™ can perform equally well when used in transparent food packaging to protect the contents from deterioration due to the effects of UV light. A typical example being the plastic packaging film used for raw meat products in a supermarket. Because of these unique qualities, nanoZ™ is likely to prove popular with suppliers of foodstuffs who would want their products to retain natural colouring even when subjected to the constant exposure of UVA rays emitted by fluorescent lights. NanoZ™ is photostable and does not migrate nor degenerate like many traditional UV absorbers.

Brian Innes, Business Development Manager with Advanced Nanotechnology said:

"An important concern for Advanced Nanotechnology was to identify a partner that could display a high level of technical expertise; Cornelius not only satisfies this need but has also built significant distribution platforms in various European markets and provides a high level of local technical support. This new relationship means that our products now have access to these important markets via a local logistical presence."

Steve Tuffley, Divisional Director with Cornelius is delighted with the new relationship:

"Advanced Nanotechnology Limited is an acknowledged world leader in this field and has created some fantastic products. We are excited by the prospect that our technical sales team can introduce Advanced Nanotechnology's products, such as nanoZ™, to our customers. There is no doubt that this new relationship will lead to the introduction of many innovative products now and in the future and we look forward to working together for continued growth for both companies"

ENDS

NOTES TO EDITORS

CORNELIUS

Cornelius is a broad based, full service organisation, providing technical materials and chemicals to industry. Its Health and Personal Care Division supplies ecologically sensitive raw materials to the personal care, pharmaceutical and nutritional health sectors. The Industrial Division distributes high quality industrial chemicals and allied products to a broad spectrum of industries. Together, the Cornelius Group delivers the highest standard of marketing, distribution and service support for over 4000 products from all over the world.

Firmly established as a market leader for each of the specialist sectors it supplies, the Cornelius Group is widely respected for the depth of its technical knowledge and its personal approach to customer service.

In each of the market sectors it supplies, the Cornelius Group has a common service philosophy: To add value to its competitively priced products by providing unequalled technical knowledge and support. It is a commitment to providing ideas and expertise that turns products into solutions.

Cornelius is about innovation, value and service: an old company with young ideas.

ADVANCED NANOTECHNOLOGY

Advanced Nanotechnology Limited is an innovator and manufacturer of advanced nanomaterials and nanomaterials products. Advanced Nanotechnology is one of the first Australian companies to operate in the nanotechnology sector and is listed on the Australian Stock Exchange (ASX:ANO). Advanced Nano's MCP™ nanopowder manufacturing technology is a patented, platform technology that enables the production of a broad range of high quality nanopowders and transparent nano-dispersion ingredients that are penetrating global nanotechnology markets. In addition to coatings and films, the Company's current products are in the personal care and environmental sectors.
